Skills

- SQL (MySQL)
- Python (Pandas, NumPy, seaborn, MatPlotLib)
- Web Scrapping/API
- Machine Learning
- Excel (VLookup, Conditional Formatting, Pivot Tables)
- Microsoft Power BI

Projects

MY SQL WORLD LAYOFFS DATA CLEANING AND EDA – Personal Project

August 2024

- **SQL Data Cleaning and Transformation**: Cleaned and transformed a dataset of 2300+ rows with 9 columns using advanced SQL techniques such as window functions, STR to DATE conversion, subqueries, and column updates to enhance data accuracy and usability
- **Data Aggregation and Analysis**: Conducted Exploratory Data Analysis (EDA) on the cleaned data, leveraging SQL's aggregate functions like MAX, MIN, and COUNT to extract valuable insights on global layoff trends.
- **Database Optimization and Feature Engineering**: Streamlined the dataset by deleting irrelevant columns and creating new ones, optimizing the database for better analysis and reporting.

POWER BI COMPANIES AND THEIR REVENUE DATA CLEANING AND VISUALZTION – Personal Project

May 2024

- **Power BI Data Cleaning and Transformation**: Managed and cleaned a dataset with over 10 columns and 5000 rows, applying conditional formatting and drill-down menus to improve data clarity and interactivity.
- **DAX Function Usage for Insights**: Utilized DAX functions like SUM and COUNT to perform data aggregation, enabling deeper analysis of combine rankings and producing actionable insights.
- **Comprehensive Data Visualization**: Created dynamic visualizations, including stacked bar charts and line charts, to effectively represent trends and comparisons, enhancing data-driven decision-making and made a compelling dashboard

API CRYPTO CURRENCY DATA SCRAPING USING PANDAS – Personal Project May 2024

- **Automated Data Scraping with BeautifulSoup**: Scraped cryptocurrency data from a website using the BeautifulSoup library and automated the process with time and sleep functions to continuously update data over a specified time frame
- **Data Handling and Cleaning with Pandas**: Stored the scraped data in a Pandas DataFrame, performing minor cleaning operations to prepare the dataset for analysis and visualization.
- **Data Visualization with Matplotlib**: Used Matplotlib to create graphs that tracked changes in cryptocurrency values over time, providing a clear visual representation of market trends.

EXCEL FULL PROJECT (DATA CLEANING AND EDA) AND MAKING A DASHBORAD – Personal Project July 2024

- Data Cleaning and Transformation in Excel: Cleaned a dataset of over 1000 rows and 10+ columns using Excel functions like TRIM, nested IFs, and removed duplicates. Ensured data consistency by converting columns to appropriate data types.
- **Data Analysis with Pivot Tables**: Created pivot tables to effectively analyze and summarize the data, providing clear insights into biker buyer trends and behavior.
- **Interactive Dashboard Creation**: Developed an interactive Excel dashboard that visualized key insights, making the dataset more accessible and actionable for decision-making.

Education

MANSOURA UNIVERSITY (2020–PRESENT) FACULTY OF ELECTRONICS AND COMMUNICATION DEPARTMENT
